Agenda for the Fourth Client Meeting

Trace Alert - Team 27

Thursday 29th April 2021

1. ## Apologies

   None.

2. ## Presentation

   Team 27 will present the first prototype of TraceAlert. The components and features completed are as follows:

   - Server and database
   - Access user's location with GPS
   - Get direct contact's userID with Bluetooth
   - Functions that determine whether the user is at risk
   - The first draft of the user interface, which can sufficiently:
     - sign up new users
     - log in
     - access and edit personal information
     - display whether the user is at risk and the number of direct contacts at different locations in the past 14 days.

3. ## Summary of the Last Meeting

   During the meeting on March 25th, we showed our pitch slides and presented to the client. Professor Falkner made some comments on our pitch slides and presentation, and also gave some suggestions:

   - Pitch slides are smart, clear and have a good argument.
   - Presentation is not smooth enough, it needs to be practiced for several times to be better.

   Also, we asked about whether we should open the camera when presenting. The answer we received was that it is not 100% necessary but it will be better if we could sit off to one corner.

4. ## Requirements Elicitation

We hope we can get feedback on the prototype we developed for milestone 1 and find out whether there are features that do not meet the requirements and what we should improve before the final milestone.

We also wish to find out if our way of risk determination and propagation is feasible as it was not precisely implemented according to the client's requirements. If our method is not ideal, we will devote time to fix the method during the second iteration.
